

Multi-Agent Systems: Project Instructions

1. Choose one of the papers in the list of projects. Prepare a rigorous survey of the paper, to be delivered together with your talk.
2. Discuss at least one connection between topics covered in class and the material presented in the paper. This can take the form of an extension or application of a topic discussed in class to the context of the paper, and/or extension/application of the paper to a topic discussed in class.
3. Define a concrete problem based on the issues raised in the previous section, or based on a needed extension to / modification of the paper you spot. This should be defined in a completely rigorous manner and care. Before writing a document describing the problem, instructor approval is required.
4. Given the previous problem, initiate an attack on its solution. Only mathematical analysis or experimental evaluation will be taken as acceptable results.
